

Ecolog Battery Information

ELPRO-BUCHS AG

swiss@elpro.ch

13.09.2007

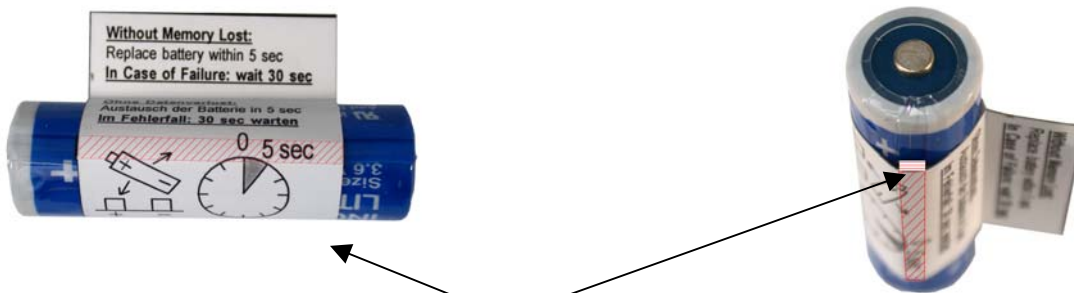

IMPORTANT:

**Battery Type: Tadiran SL760, Lithium 3.6V
Tadiran TL 5903**

Do not use any other brand as they might passivate and then they are not anymore in a position to supply power to Ecolog Logger.

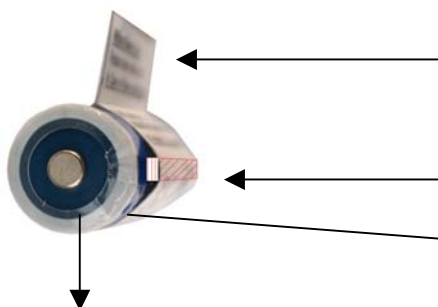

Technical modification at the lithium battery, Part-Nr.: 2820 (2819)

This is needed to prevent the shifting of the Battery inside the holder.

Under the label of the battery is now a flat pin. This pin prevents that the lithium battery in the mounting plate can shift. The battery can not move any more, caused from a shock or push during a transportation for example. The contacts can not be interrupted.

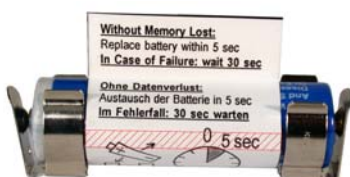

Correct inserting of the lithium battery into the ECOLOG:

1. The end of paper must be on the top, so that the battery can be pulled out of the mounting plate

2. The pin must be situated laterally.

3. Press the battery straight downward into the mounting plate

Like this is no shifting of the battery possible
